## Inventive Solutions

TLC Technologies implements inventive currency conversion and reporting solution ... Lincoln selects TLC Technologies to upgrade and standardize on Oracle / Hyperion System 9 platform.

**Lincoln Financial:** Lincoln Financial Advisors helps families maintain financial wealth. The Company concentrates on insurance and annuity products underwritten by its parent, as well as third-party insurance policies, mutual funds and college savings products.

Being a leader comes with significant business challenges. One of these major challenges was reporting and converting on specific foreign currency transactions for one of Lincoln Financials' subsidiaries based in Great Britain. The existing process was very time consuming and included too many excel documents, which could not be easily audited.

TLC Technologies came up with a solution to this problem, and was able to write customized calculation scripts for Lincoln's Essbase 6.5 and 7.1 systems. TLC enabled the conversion process to be fully automated and captured in Essbase, enhancing an existing process and saving Lincoln many man-hours per month and to become fully compliant with audit requirements.

Lincoln was pleased with the results and capabilities of TLC Technologies, and has requested TLC actively participate in an upgrade of Lincoln's Essbase 6.5 & 7.1 to Oracle / Hyperion System 9. The TLC architecture team worked with Lincoln on a unique development realm which is now used for various testing and strategic decisions on hardware, process improvements, and step by step production upgrades to secure the environment.

Lincoln Financial remains a client to TLC Technologies, and is in the final testing phase of implementing Oracle / System 9.
