## Automation Success

**TLC Technologies partnered with our organization to automate the processing for our Financial Reporting application allowing us to provide our applications to our End Users on 27x7 availability basis thorough a continuous update process completely free of human intervention.**

**The innovative approach taken by TLC fit our needs 100% and has withstood the test of time.**

**Our applications have been running using the automation methodology for eight 8+ years now with great reliability.**

**Director of Financial Reporting**

**Oracle's Hyperion Suite:** TLC's client is a world-leading financial services company, advising clients in all aspects of finance, around the world, around the clock. The company has adapted a client focused, capital-efficient strategy to optimize the use of capital and improve its cost structure in order to deliver attractive returns for their shareholders.

In Private Banking, they remain committed to a long-term international growth strategy, focusing on onshore, faster growing and large markets and the ultra-high-net-worth individual client segment as key growth areas, and continuing to build a strong position in the market while enhancing their efficiency.

In Investment Banking, they are redeploying capital in order to invest and grow businesses and significantly reduce risk-weighted assets and their cost base. They are investing in and growing businesses where we have competitive advantages and synergies with Private Banking and Asset Management.

In Asset Management, they are expanding the range of alternative products in collaboration with Private Banking and Investment Banking, growing there fee-based revenues and driving further cost reductions through platform optimization and outsourcing.

In order to achieve these business goals the company needed their decision makers to have access to their financial and performance information on a 24x7 basis. Old or stale information would not provide the business with the data required to quickly respond to the client and business segment demands. The company engaged TLC Technologies to design and build the automation required to meet the information need.

TLC Technologies consulted with the client's Business and Information Technology representatives to craft an automation process that would provide the 24x7 availability the company needed. Our experts designed a customized batch process, using Oracle's Hyperion Suite, to fully automate the processing for the application. The process runs without human intervention 24hrs a day each day and releases new versions of the Hyperion applications in conjunction with the availability of data from region to region. The result is a constantly updating application providing the global organization with the most up-to-date information available on a global basis.

The automation was so well received and has run like clockwork for 8+ years to-date that TLC's methodology has been leveraged to automate numerous additional Oracle & Hyperion based application with the client's application portfolio.
