Hyperion Financial Management

TLC Technologies has been a valued partner over our long and complicated multinational HFM implementation.

TLC's recommendations have been helpful and have streamlined several aspects of the project.

We are happy TLC worked with us on this challenging project and look forward to their continued support.

Corporate FP&A Analyst

Oracle's Hyperion Financial Management (HFM) module:

TLC's client is a leader in the foundry industry. Established in early 2009 as the result of a multi-company merger, then new organization set out to achieve the simple but ambitious goal to become the world's first truly global foundry. In a short span of time, the company has achieved this milestone with manufacturing operations spanning three continents for flexible and secure supply. Furthermore, they are charting a bold new course to completely reshape the landscape of the foundry industry through a collaborative approach to both technology development and customer engagement.

The client has recognized that the pace of change in the world is much faster today as individuals, companies and cultures are more interconnected than ever before. Whole industries can be transformed as businesses learn to think more globally and restructure to tap these resources. Therefore, in order to succeed in this environment, the world is in need of new models for innovation, particularly in industries - like semiconductors - that have such a huge impact on our daily lives.

As more semiconductor companies adopt the outsourced manufacturing paradigm, they are looking for deep collaboration with their foundry partners. TLC's Client delivers a collaborative model for customer engagement and is tapping their history as part of a leading Integrated Device Manufacturer (IDM) to offer a unique model for design enablement. This is a model that is built around technology and design co-optimization to deliver parts that meet the stringent requirements of high performance with low leakage and high yield. The end result is a superior level of performance and innovation, brought to market with amazing speed - benefiting chip-makers, product manufacturers and end users.

Business Challenge:

As a newly merged and rapidly growing entity, the client recognized that they needed to implement innovative solutions for their internal needs as they have for their customers. The first step in that process was to implement Oracle's Hyperion Financial Management (HFM) and Financial Data Quality Management (FDM) to manage their financial processes and ensure they could produce accurate financial disclosures on their business. The client executed a RFP selection process and TLC Technologies was selected as their implementation partner.

Solution:

TLC worked with the client's business resources to implement Oracle's Hyperion Financial Management (HFM) and Hyperion Financial Data Quality Management (FDM) modules to draw together their financials from multiple subsidiary organizations and produce accurate Enterprise Financials for the organization.
